COMICCRAFT AI

Phase 3 - Project Design

The project design explains how the ComicCraft AI application will be organized and how the user will interact with it.

Key Objectives

- Design the web page using HTML and CSS.
- Create the backend using Python and FastAPI.
- Use templates for displaying the comic interface.
- Store static images and other frontend files in the static folder.
- Connect the story generation process with the user interface.
- Plan the PDF export functionality.

Expected Outcome

The basic system structure and user interface design were prepared.
